EDUCATION

Loyola University Maryland | 3.7 GPA

Baltimore, MD

Bachelor of Science in Computer Science – Data Science Minor

Expected May 2027

- **Courses:** Software Design, Computer Architecture, Database Management, Operating Systems, Computer Networks, Statistical Computing, Research Methods, Software Engineering
- **Organizations:** Robotics Club Officer, Competitive Programming Club, Hyman Science Scholar

WORK EXPERIENCE

Software Engineer Intern

King of Prussia, PA

Fiserv

June 2026 – August 2026

- Implemented an administration tool using Java Spring, HTML/CSS, and JavaScript that enabled support teams to mass-update merchant MySQL records, cutting manual processing times in half.
- Launched a core Java Spring microservice that serves bank identification data for payment authentication, eliminating duplicate processing across multiple services by establishing a single, reliable REST API.
- Modernized a payment processor emulator by implementing schema-based data parsing, upgrading the network layer reliability, and modularizing components, to reduce technical debt and enable complex QA test scenarios.

Peer Tutor

Baltimore, MD

Loyola University Maryland

Sept 2024 – May 2026

- Tutored university students in computer science, calculus, physics, and statistics, breaking down complex problems and topics to improve their understanding and problem solving skills.
- Guided one to two students per week through coursework, raising students academic confidence and test scores.

Data Annotator

Remote

Welocalize

July 2024 – Sept 2025

- Annotated user and machine-generated content against evaluation criteria to improve the search result relevance of models driving Google, Bing, and other major search engines.

PERSONAL PROJECTS

OrganicReader – Mobile Application

[Project Link](#)

- Developed an offline document-reading React Native app using TypeScript and open-source TTS models, featuring background loading to sync real-time word highlighting without audio latency.

SimplePOS – Desktop Application

[Project Link](#)

- Designed a desktop point-of-sale application for weighted retail items in Java, featuring a product catalog, cart management, PDF receipt generation, and persistent transaction history with SQLite.

Proxy Server – Terminal Application

- Created a custom web browser and caching proxy server from scratch in C, enabling multiple clients to concurrently request web data through the server to accelerate page loading speeds.

TECHNICAL SKILLS

Languages: Java, C/C++, TypeScript, JavaScript, Python, SQL, HTML/CSS

Frameworks: Spring Boot, Java Web, React, ReactNative, Node.js, MySQL, SQLite, MongoDB

Tools: Git, Docker, Linux, Maven, Postman, PowerBI, Figma
